NOVEMBER 2025

Title: ALAL-AI: A Smart Mobile App for Medication Reminders and Senior Care

Subtitle: “From medication reminders to friendly companionship, Alalai serves as the eyes and voice of family members who can’t always be there.”

The statement highlights the importance of the AlalAI mobile app and encourages elders, family members, and caregivers to see it as more than just an ordinary program. It focuses on the app’s potential to serve as a meaningful companion for seniors, offering attentive yet simple care and bringing comfort and enjoyment to their everyday lives.

Logo: Company or Project Logo

Figure 1. ALALAI’s Logo

- **Heart Shape (Guardian and Elder Silhouette):** Represents the relationship between the elder and their family or caregiver, showing that ALALAI serves as a loving bridge of care, protection, and emotional connection between generations.
- **Supporting Hand Element:** Symbolizes guidance, reliability, and daily assistance, expressing how ALALAI helps elders stay safe and independent while gently supporting them through everyday tasks.
- **AI with Heartbeat Line and Medical Cross:** Emphasizes the health-focused intelligence of ALALAI, highlighting real-time monitoring, wellness reminders, and emergency response capabilities that ensure user safety.
- **Hidden “ALALAI” Name in the Logo:** Shows that AI assistance is always present but not intrusive, working quietly in the background to support seniors seamlessly, creating a modern, clean, and meaningful brand identity.

- **Color Palette:** Blue symbolizes dependability, which is essential for an app designed to assist seniors. Red represents the emotional and health-centered mission of the app. Green stands for growth, wellness, and continual assistance.

PROBLEM STATEMENT

PROBLEMS

1. Missed medications, meals, and important tasks due to forgetfulness or cognitive decline.
2. Social isolation and emotional distress among elderly individuals living alone.
3. Difficulty for families and caregivers to consistently monitor elderly loved ones, especially when separated by distance or work.
4. Limited availability of reliable and affordable elderly care technologies in the Philippines.

DESCRIPTION

Aging is the gradual process of physical, emotional, and cognitive decline that every individual undergoes, but in the Philippines, it presents unique challenges (Manulife, 2025). Around 10.6% of Filipinos aged 60 and above are affected by dementia, with nearly a quarter (23.2%) experiencing mild cognitive impairment and 85.5% having Alzheimer’s disease. The estimated dementia incidence in the country was 16 per 1,000 in 2021 (Anlacan et al., 2024). This prevalence is projected to rise significantly, with nearly 1 million cases nationwide by 2030 and more than 2 million by 2050 (CEDTyClea, 2024).

Despite the cultural norm of extended family households, demographic shifts have led to a growing number of elderly Filipinos—particularly in rural areas—living alone. The COVID-19 pandemic worsened this isolation (Castillo et al., 2021). Many seniors also have limited health insurance, lower income, and poorer self-reported health (Moncatar et al., 2019). These factors, combined with memory decline and social isolation, heighten their vulnerability and put increasing pressure on families.

Daily struggles include missed medications, forgotten tasks, and prolonged loneliness, raising risks of illness and emotional distress. Families, especially those separated by work or distance, struggle with consistent monitoring. Makeshift coping methods such as alarm clocks, sticky notes, and pillboxes provide temporary support, while reliance on neighbors or part-time caregivers remains irregular and insufficient.

In CALABARZON, the most populous region in the country, the population grew from 14.4 million in 2015 to over 16.2 million in 2020 (Philippine Statistics Authority [PSA], 2020). Within this growth is a rapidly expanding elderly sector, with 8.6% of Filipinos aged 60 and above in 2020—a figure projected to nearly double in the coming decades (Reyes, 2020). One major challenge lies in the financial strain of healthcare and caregiving, as around 59% of healthcare expenses are paid out-of-pocket, making specialized facilities and services unaffordable for most households (Felipe-Dimog et al., 2024).

These fragmented and inconsistent systems emphasize the urgent need for a more reliable, affordable, and culturally adapted support mechanism for elderly Filipinos. Without timely intervention, the combined effects of memory decline, minimal supervision, and loneliness will continue to place both seniors and their families under significant strain.

Additionally, this project aims to contribute towards the advancement of the Sustainable Development Goals (SDGs), particularly:

SDG 3: Good Health and Well-Being

- Target 3.4: By 2030, reduce by one third premature mortality from noncommunicable diseases through prevention and treatment, and promote mental health and well-being.
- Indicator 3.4.1: Mortality rate attributed to cardiovascular disease, cancer, diabetes, or chronic respiratory disease.

SDG 10: Reduced Inequalities

- Target 10.2: By 2030, empower and promote the social, economic, and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion, or economic or other status.
- Indicator 10.2.1: Proportion of people living below 50% of median income, by sex, age, and persons with disabilities.

IMPACT: HOW THE PROBLEM AFFECTS YOUR TARGET MARKET.

1. Decline in Health Management and Medication Adherence

- Elderly Users:** Many seniors forget to take their prescribed medications on time, leading to poor health outcomes, worsening of chronic conditions, and increased risk of hospitalization.
- Family Members and Caregivers:** Families experience constant worry and stress knowing that their elderly loved ones may miss important medications or doctor's reminders when left unsupervised.
- Healthcare Providers:** Missed medications and irregular health routines result in more frequent consultations and hospital visits, increasing the workload for healthcare professionals and raising healthcare costs.

2. Emotional and Social Isolation

- Elderly Users:** Loneliness and lack of social engagement negatively affect seniors' emotional well-being, increasing the risk of depression and cognitive decline.
- Family Members:** Distance and busy lifestyles often prevent regular interaction, leading to guilt and emotional distress among family members who wish to stay connected but lack the means.
- Caregivers:** Without tools that foster emotional connection and engagement, caregivers may struggle to provide holistic care that addresses both the physical and emotional needs of the elderly.

3. Limited Accessibility to Continuous Monitoring and Assistance

- Elderly Users:** Seniors who live alone or have limited mobility are at higher risk of emergencies going unnoticed, leading to delayed medical attention and potentially life-threatening outcomes.

b. **Family Members:** Lack of real-time updates about their elderly loved ones creates anxiety and uncertainty, especially when families live far away.

c. **Healthcare and Senior Care Institutions:** The absence of accessible, affordable monitoring tools increases operational challenges and limits the reach of support services for elderly citizens.

CURRENT SOLUTIONS: EXISTING SOLUTIONS AND THEIR SHORTCOMINGS.

Manual Reminders

- Many elders rely on handwritten notes, sticky pads, or calendars to remember their medications and daily routines.
- These reminders are often misplaced, forgotten, or ignored, especially for seniors experiencing memory decline.
- Dependence on written reminders also poses challenges for those with poor eyesight or limited literacy.

Basic Alarm or Reminder Apps

- Seniors sometimes use default phone alarms or simple reminder apps to track medication schedules.
- These apps lack personalization, voice interaction, or confirmation features to ensure the medication is actually taken.
- Most are not designed with elderly users in mind, making them difficult to navigate for those unfamiliar with smartphones.

Family and Caregiver Supervision

- Many families and caregivers rely on direct supervision or frequent calls to check on their elderly loved ones.
- This approach is time-consuming and emotionally exhausting, especially for working family members or those living far away.
- The absence of constant monitoring increases the risk of missed medications or unnoticed health concerns.

Telehealth and Senior Care Platforms

- Some apps and online services provide teleconsultation and remote monitoring features.
- However, these platforms often require paid subscriptions and stable internet connections.
- They can be complex to set up and operate, discouraging elderly users who are less tech-savvy.

Voice Assistants and Smart Devices (e.g., Alexa, Google Assistant)

- Smart home devices can perform reminders and voice interactions for daily tasks.
- Despite their potential, these systems are expensive, rely heavily on English language commands, and require advanced setup.
- Their dependence on strong internet connectivity also limits accessibility for seniors in rural or low-income areas.

SOLUTION

PRODUCT/SERVICE DESCRIPTION

AlaAI is a voice-activated mobile application specifically designed to cater and assist Filipino senior citizens with daily medication reminders, health monitoring, and emotional companionship in Tagalog, English, or even Taglish. The app's easy navigation and features that highly relies on voice assistant functions as a digital caregiving assistant, helping elders maintain independence while giving families peace of mind through real-time updates and smart reminders.

It is a freemium mobile app, providing free access to basic reminders and voice interactions. Premium features include unlimited token access in talking/interacting with the AI chatbot 'Apo' and real-time location tracking, unlimited cognitive games for elder entertainment, and family-linked monitoring dashboards.

KEY FEATURES: HIGHLIGHT THE MAIN FEATURES AND BENEFITS.

A. Voice-Activated Assistance

Feature: Elders can interact with the app using natural voice commands to ask for reminders, health tips, or companionship messages.

Benefit: This reduces the need for screen navigation and makes the app easy to use for seniors with limited technical skills or mobility challenges.

B. Medication And Health Reminders

Feature: The app notifies users when it is time to take medication, drink water, or complete health-related tasks.

Benefit: This prevents missed doses and improves medication adherence, reducing health risks for elderly users living alone.

C. Localized Filipino Language Support

Feature: AlalAI communicates in Filipino and other local dialects.

Benefit: This increases accessibility for seniors who are not fluent in English, making the app culturally and linguistically inclusive.

D. Family And Caregiver Dashboard

Feature: Linked accounts allow family members or caregivers to monitor reminder compliance and receive alerts if a task or medication is missed.

Benefit: This offers families peace of mind and ensures quick intervention in case of health-related neglect or emergencies.

E. Mood And Companion Mode

Feature: AlalAI uses conversational AI to engage seniors in meaningful voice interactions to reduce loneliness.

Benefit: This provides emotional support, fosters mental well-being, and reduces isolation, especially for seniors living away from family.

F. Emergency Response Feature

Feature: A one-tap or voice-activated emergency alert system notifies registered contacts.

Benefit: This ensures rapid response during health emergencies, increasing safety for elderly users.

USE CASES: EXAMPLES OF HOW CUSTOMERS WILL USE YOUR PRODUCT/SERVICE.

Daily Medication Reminder

- Scenario: Lilia, a 72-year-old retiree, often forgets to take her morning pills.
- Use Case: AlalAI gently reminds her with a friendly voice alert, confirms when she has taken her medicine, and logs it for her daughter to view in the caregiver dashboard.

Emotional Companionship

- Scenario: Mang Ernesto lives alone since his children work abroad

- Use Case: He uses AlalAI's companion mode to talk about his day, listen to positive affirmations, and receive personalized greetings, reducing feelings of loneliness.

Remote Family Monitoring

- Scenario: Anna works overseas and worries about her elderly mother's health.
- Use Case: Through the guardian dashboard, Anna receives daily reports and notifications if her mother misses medication or does not respond to reminders.

Localized Interaction

- Scenario: Nanay Cora prefers speaking in Tagalog and is not comfortable with English apps.
- Use Case: AlalAI interacts with her in Filipino, making the experience natural and accessible, encouraging daily engagement.

Emergency Situations

- Scenario: Tatay Ben suddenly feels dizzy at home.
- Use Case: He says, "AlalAI, tulong" and the app immediately notifies his daughter and sends an emergency alert with his current location.

MARKET ANALYSIS

Market Size

Overview of Elderly Population in CALABARZON

CALABARZON remains the most populous region in the Philippines with approximately 16.9 million residents as of the 2024 PSA Census. It also has a growing elderly sector, with 8.6% of its population aged 60 and above in 2020 — a figure expected to continue rising in the coming decades due to demographic aging. This increase is paired with a shift toward seniors living independently, creating a stronger demand for accessible digital assistance, health reminders, and emotional support systems (PSA, 2020; PSA, 2024).

Total Addressable Market (TAM)

The total addressable market for ALALAI encompasses Filipino seniors aged 55 and above who have access to smartphones. Nationally, this sector represents approximately 12 million individuals. This population reflects the full-scale future potential of ALALAI once the app is expanded and adopted throughout the Philippines.

Serviceable Available Market (SAM)

To ensure a strategically strong early rollout, ALALAI focuses on two key regions: CALABARZON and the National Capital Region (NCR). CALABARZON provides a large population base, while NCR leads the country in digital adoption, with more than 90% smartphone ownership among its residents (PSA, 2023). Combining these regions yields an estimated 2.4 million elderly individuals who are reachable and have the technological means to use the platform — forming ALALAI’s SAM.

Serviceable Obtainable Market (SOM)

Considering strategic expansion, user trust-building, and gradual scaling, ALALAI adopts a conservative yet sustainable goal of capturing 1% of its SAM within the first five years. This results in a target of approximately 24,000 active users by Year 5. This projection supports realistic business forecasting while demonstrating clear market

potential and upward scalability as brand awareness, healthcare partnerships, and regional deployment progress over time.

Target Market: Define Your Ideal Customers

1. Elderly Individuals (55+) - Seniors who face challenges with memory, daily routines, and social isolation. They are the primary users of the app, benefiting directly from medication reminders, health monitoring, and AI companionship.

2. Family Members and Caregivers - Adult children or caregivers who wish to ensure the safety and well-being of their elderly loved ones. They use the linked dashboard to monitor reminders, receive alerts, and provide timely interventions.

3. Senior Care Facilities and Local Health Units - Organizations that provide support to seniors, including barangay health centers or private elderly care services. They can integrate AlalAI as part of their elder care programs to improve efficiency, safety, and engagement.

4. Healthcare and Wellness Partners - Medical practitioners, clinics, and health-focused NGOs that aim to support elderly health initiatives and promote preventive care. Partnerships with such organizations expand the app's reach and credibility.

Market Trends: Key trends and growth drivers.

1. Rising Adoption of Digital Health Solutions

- **Trend:** More Filipino seniors and their families are embracing smartphones, apps, and telehealth solutions for health monitoring and daily care.
- **Growth Driver:** Increasing mobile penetration, affordable internet, and government campaigns promoting digital literacy among older adults.

2. Growing Awareness of Elder Loneliness and Mental Health

- **Trend:** Families are more conscious of the emotional and social well-being of elderly relatives living alone.

Growth Driver: Reports of rising senior isolation during the COVID-19 pandemic and ongoing media coverage of mental health are driving demand for companion apps.

3. Emphasis on Preventive Healthcare

- **Trend:** Preventive healthcare and early intervention are becoming priorities among Filipino families and healthcare providers.

Growth Driver: Rising costs of hospital visits and chronic disease management push families to adopt tools that support medication adherence and routine monitoring.

Integration of AI and Voice Technology in Healthcare

- **Trend:** AI-powered solutions are increasingly used to provide personalized care, reminders, and companionship for seniors.
- **Growth Driver:** Advances in AI, voice recognition, and natural language processing enable accessible, localized interactions for seniors in Tagalog, English, or Taglish.

Competitive Landscape: Key competitors and market positioning.

1. Carely (Philippines)

Overview: Provides medication reminders and limited teleconsultation for seniors.

Market Positioning: Targets Filipino families, offering basic health management. Lacks AI companionship and multi-language voice support.

2. Pill Reminder Apps (Generic)

Overview: Mobile apps focused only on medication schedules.

Market Positioning: Accessible and low-cost, but do not address social isolation, cognitive engagement, or real-time guardian alerts.

3. Elliq (Intuition Robotics)

Overview: AI companion for seniors, conversational and proactive.

Market Positioning: International product, premium-priced, mainly in English; not localized for Filipino culture or language.

4. Medical Guardian

Overview: Provides alert systems for emergencies, fall detection, and caregiver notifications.

Market Positioning: Strong on safety, weak on companionship and daily engagement. Subscription costs may be high for the Filipino market.

Edge of AI:

- Fully localized for Filipino seniors with Tagalog, English, or Taglish voice interactions.
- Combines medication reminders, companionship, emergency alerts, and cognitive games in one cost-effective mobile app.
- Designed to engage families through real-time monitoring while fostering senior independence.
- Lower subscription fees compared to imported alternatives make it accessible to middle-income households.

BUSINESS MODEL

REVENUE STREAMS: HOW WILL YOU GENERATE REVENUE?

1. Freemium Model

Our primary source of revenue is the freemium model, which allows users to access essential features for free while offering the option to upgrade to a premium subscription for advanced capabilities. This model ensures accessibility, user engagement, and revenue growth through subscriptions.

Basic Plan (Free) includes:

- 20 minutes of voice messaging with Apo
- One connected guardian
- Non-invasive ads
- Unlimited reminders
- Apo reminders twice a day (voice reminders)
- Access to two built-in cognitive games only

Premium Plan (Subscription-Based) includes:

- Unlimited voice messaging with Apo
- Up to three connected guardians
- No ads
- Unlimited reminders
- Full offline access to Apo
- Unlimited Apo reminders (voice reminders)
- Access to all built-in cognitive games
- Location tracking

The freemium plan introduces users to our platform and demonstrates its value, encouraging them to upgrade to the premium subscription for a more comprehensive experience.

2. Advertisements

In addition to subscription revenue, our secondary source of revenue is through advertisements. We generate income through non-invasive advertisements displayed to basic plan users. These ads are carefully designed to ensure they do not disrupt the user experience, providing an additional revenue stream while keeping the basic plan free and accessible.

PRICING STRATEGY: PRICING MODEL AND RATIONALE

Monthly Subscription: PHP 299

This price point is strategically set based on competitor app premium pricing and benchmarks regarding the average Filipino's willingness to invest in premium subscriptions. It balances affordability for users while ensuring sustainability and growth for ALAL-AI.

SALES STRATEGY: SALES CHANNELS AND METHODS

We plan to reach and engage our target market through a combination of online and community(offline)-based channels:

1. Online Channels

- **App Stores:** AlalAI will be available on Google Play and Apple App Store, focusing initially on Android users due to high smartphone penetration in the Philippines.
- **Official Website:** The website will feature app details, FAQs, and tutorials for families and caregivers, emphasizing data privacy and accessibility.
- **Social Media Platforms (Facebook, Instagram, TikTok):** Online advertisements, promotional videos, and relatable content to raise awareness.
- **Digital Ads:** Targeted Google Ads and Facebook campaigns focusing on keywords like elder care, medication reminders, and senior companion apps.

2. Offline Channels

- **Healthcare Partners:** Collaborate with local pharmacies, clinics, and hospitals to promote AlalAI through flyers, in-store ads, and bundle promotions.

- **Programs from LGUs and NGOs:** Seminars, campaigns, and advocacy programs, utilizing volunteers and organizations focused on elder care to promote ALAL-AI.
- **Community Centers and Senior Events:** Conduct demonstrations in senior citizen gatherings and health expos to encourage hands-on engagement.

These channels and methods ensure both digital reach and community-level engagement, creating multiple touchpoints to connect with potential users.

PARTNERSHIPS: KEY PARTNERS AND ALLIANCES

To strengthen ALAL-AI's impact, we aim to collaborate with key organizations across several areas:

- **Local Government Units (LGUs):** Integrate ALAL-AI into senior citizen programs for direct access to elder care services.
Healthcare Institutions: Support remote monitoring, provide medical connectivity, and enhance family caregiving.
Universities and Research Institutions: Collaborate with UP Los Baños, Batangas State University, and others for innovation, testing, and training.
- **Non-Government Organizations (NGOs):** Work with COSE, HelpAge Philippines, and similar groups to expand outreach and inclusivity, ensuring no elder is left behind.

These partnerships create a network that connects community support, healthcare, research, and advocacy, reinforcing ALAL-AI's adoption and impact.

MARKETING AND SALES STRATEGY

MARKETING PLAN: How you will attract customers.

1. Digital Marketing Campaigns

- a. **Social Media Engagement:** Share stories from real Filipino families using AlalAI, focusing on emotional impact and reliability.

- b. **Influencer and Advocate Collaborations:** Partner with healthcare professionals, lifestyle vloggers, and senior advocates to share how AlalAI improves daily life.
- c. **Content Marketing:** Publish easy-to-digest guides and infographics on senior health, caregiving tips, and app usage on Facebook and YouTube.

2. Community Outreach

- a. **Senior Associations:** Collaborate with senior citizen groups to host free workshops on using AlalAI for reminders and companionship.
- b. **Barangay and LGU Partnerships:** Conduct app demonstrations and distribute free premium trial codes during health caravans and community wellness days.

3. Educational Initiatives

- a. **Training Sessions:** Conduct family-oriented tutorials that teach younger relatives how to set up and use AlalAI for their elders.
- b. **Printed Materials:** Develop brochures and guides distributed in pharmacies and clinics to assist non-tech-savvy users.

SALES PROCESS: Steps to Convert Leads into Customers

1. Lead Generation

- Utilize online ads, Facebook campaigns, and LGU collaborations to drive awareness and downloads.

2. Initial Contact

- Engage potential users through email marketing and social media chatbots offering personalized assistance.

3. Demonstration and Trial

- Offer a 7-day free premium trial with guided onboarding and daily app tips to encourage retention.

4. Follow-Up

- Send personalized reminders and offer discounted first-month premium rates for new users.

5. Conversion

- Implement special discounts for first-time subscribers and early adopters, ensuring affordable transitions from free to paid tiers.

6. Retention and Growth

- Provide loyalty discounts and badges for long-term subscribers.
- Regularly release feature updates based on user feedback to sustain engagement.

PRODUCT DEVELOPMENT

Roadmap: Development timeline and key milestones.

PHASE 1

July 2025

- **Team Formation** - Integrate team members' interests, prior experiences, and established competencies to promote a cohesive and highly motivated team dynamic.
- **Topic Brainstorming** - Develop and engage in discussions on potential research topics, drawing upon the team's varied insights and specialized knowledge.

August 2025

- **Project Scope and Requirements** - Specify the application's primary features and functional requirements, produce a detailed requirements specification, and design the system architecture while selecting an appropriate technology stack.
- **Idea Consultation with the Mentor** - Conduct regular consultations and collaborative deliberations with the mentor to iteratively refine the project concept and ensure compliance with academic and technical standards.

September 2025

- **Initialization of Project Proposal** - Further revise the project proposal by refining objectives, scope, methodology, and expected outcomes, incorporating feedback, and ensuring clarity, feasibility, and alignment with academic and technical standards.

October 2025

- **Project Incubation under PUP Research Institute for Strategic Foresight and Innovation (RISFI)** - “ALALAI” has been recognized as one of the Top 10 projects and has moved forward to the product development stage. The team will undergo a one-month incubation at the PUP Research Institute for Strategic Foresight and Innovation (RISFI), benefiting from adviser guidance and available support services.
- **Onboarding and Resource Identification** - Acquaint the team with the support services provided by PUP RISFI and assess any knowledge gaps, focusing on legal aspects and technical competencies, to ensure the team is well-prepared.
- **Wireframing and Prototyping** - Design comprehensive wireframes outlining the app’s layout and navigation, and build interactive prototypes to demonstrate and evaluate its functionalities.
- **UI/UX Design** - Develop a user-friendly interface prioritizing usability and accessibility, while ensuring the design aligns with the app’s objectives and meets user expectations.

PHASE 2

November 2025

- **Set up Development Environment** - Develop a user-friendly interface prioritizing usability and accessibility, while ensuring the design aligns with the app’s objectives and meets user expectations.
- **Front-End Development** - Build the client-side of the application to deliver a smooth and easy user experience, implementing UI components and interactions according to the design specifications.

- **Back-End Development** - Develop the server-side architecture and database infrastructure, implementing APIs and integrations to enable the app's functionalities.

PHASE 3

Current Status: Stage of Product Development

The Wireframing and UI/UX design phase began on October 25 and was completed on November 4, resulting in the initial interface concepts that prioritize simplicity, intuitive navigation, and an enhanced user experience. Front-end development took place from November 7 to November 15, establishing the foundational visual and interactive components of the application.

Subsequently, efforts have been focused on building the backend system and implementing core features, particularly the task management and smart reminder functionality essential to Alal-AI's purpose. The prototype now also includes a Filipino-based, voice-activated AI assistant designed to support seniors in performing daily tasks more independently.

The project is currently in its final refinement and testing stage, with full prototype completion targeted for November 28. These key development milestones reinforce Alal-AI's commitment to delivering an accessible, affordable, and reliable elder-friendly application tailored specifically to the needs of Filipino seniors.

Future Plans: Long-term vision for the product.

1. Smartwatch Integration

ALALAI will integrate with smartwatches to monitor vital signs like heart rate, activity levels, and sleep patterns in real time. This integration will provide seniors and their guardians with more accurate health insights, enabling timely alerts and personalized care recommendations.

2. Camera Access for Guardian

Future updates will include optional camera access for guardians, allowing them to visually check on seniors remotely when necessary. This feature enhances safety,

strengthens trust, and provides peace of mind for families without being intrusive in daily life.

3. Voice-Activated Emergency Alerts

ALAL-AI will support voice-activated emergency alerts, enabling seniors to request help quickly during critical situations. By simply speaking a trigger phrase, the AI can notify guardians and emergency contacts instantly, ensuring fast response even if the user cannot access the device manually.

4. Customizable AI Voice

The app will allow users to select a personalized AI voice, making interactions feel more familiar and comforting. This customization not only improves user engagement but also strengthens the emotional connection between the senior and the AI companion.

5. NLP Model Specialized in the Filipino Language

ALALAI will develop a natural language processing (NLP) model specialized in Filipino and local dialects, trained on user-provided data with consent. This will improve the AI's understanding of natural speech, making reminders, conversations, and emergency responses more accurate and culturally relevant.

FINANCIAL PLAN

OVERVIEW: ESTIMATED MARKET SIZE AND PREMIUM CONVERSION RATE
(REVENUE BASIS)

Estimated Market Size

YEAR	USERS
1	1,000
2	4,000
3	10,000
4	18,000
5	24,000

Based on our market analysis, the elderly population in the Philippines aged 55 and above with smartphone access is estimated at approximately 12 million. Focusing on a reachable target market within NCR and Region 4A, we estimate around 2.4 million potential users.

Adopting a conservative approach, we project capturing 1% of this market over the next five years, resulting in 24,000 users by Year 5. Our adoption curve anticipates gradual growth, starting with 1,000 users in Year 1 and scaling steadily to 4,000 in Year 2, 10,000 in Year 3, 18,000 in Year 4, and reaching the full 24,000 users by Year 5. This projection reflects a realistic yet achievable trajectory for market penetration within the targeted regions.

Premium Conversion Rate

YEAR	TOTAL USERS	PREMIUM	PREMIUM COUNT
1	1,000	8%	80
2	4,000	8%	320
3	10,000	8%	800
4	18,000	8%	1,440
5	24,000	8%	1,920

Column Explanation:

1. **Year** → The numbered year in your forecast (Year 1, Year 2, ... Year 5).
2. **Total Users** → Total number of users using your app/service in that year.
3. **Premium %** → The percentage of total users expected to subscribe to the premium plan (in this case, 8%).
4. **Premium Count** → Number of users who become premium subscribers, calculated as:

Premium Count=Total Users×Premium %

REVENUE PROJECTIONS: SALES FORECAST FOR THE NEXT 5 YEARS.

YEAR	PREMIUM COUNT	PREMIUM SUBSCRIPTION PRICE	MONTHLY REVENUE	ANNUAL REVENUE
1	80	299	23,920	287,040
2	320	299	95,680	1,148,160
3	800	299	239,200	2,870,400
4	1,440	299	430,560	5,166,720
5	1,920	299	574,080	6,888,960

The table summarizes our projected premium subscription revenue over five years. It shows the expected number of premium users each year, the fixed subscription price of ₱299 per device per month, and the resulting monthly and annual revenue.

The ₱299 price point was chosen to balance affordability for families while providing access to essential safety and monitoring features, such as multiple guardian support and extended alerts. With this pricing, even a conservative 8% premium conversion rate generates substantial revenue, allowing the business to cover costs, scale efficiently, and achieve profitability as early as Year 1, with significant growth through Year 5.

Figure 1. Projected Monthly and Annual Premium Revenue

EXPENSE PROJECTIONS: PROJECTED COSTS AND INVESTMENTS.

1. Team Compensation

Development Team (Annual):

Year 1: PHP 75,000

Year 2: PHP 100,000

Year 3: PHP 115,000

Year 4: PHP 130,000

Year 5: PHP 145,000

2. LLM / Whisper / Firebase Costs *(User-driven, scales with adoption)*

Year 1: PHP 79,088 – API-heavy (1,000 users)

Year 2: PHP 151,008 – 60% API, 40% self-host

Year 3: PHP 226,008 – 40% API, 60% self-host

Year 4: PHP 286,008 – 20% API, 80% self-host

Year 5: PHP 347,008 – fully self-hosted, stable

Figure 2. Expense Breakdown with Self-Hosting Transition

This table shows projected annual expenses and highlights the migration from API to self-hosting. In Year 1, all users rely on APIs, resulting in higher per-user costs. By Year 2–3, some users are on self-hosted infrastructure, reducing the cost per user. By Year 5, all users are fully self-hosted, making the platform much more cost-efficient, even as the user base grows. The progress bar visually shows this transition at a glance.

3. Miscellaneous Costs

Legal, Marketing, Office Supplies, etc.: PHP 25,000 per year

Year 1: PHP 25,000

Year 2: PHP 30,000

Year 3: PHP 35,000

Year 4: PHP 40,000

Year 5: PHP 50,000

4. Play Store Fee

One-time in Year 1: PHP 1,460

SUMMARY TABLE OF ANNUAL EXPENSE COST PROJECTIONS

YEAR	TEAM COMPENSATION	MISCELLANEOUS	BACKEND	TOTAL ANNUAL EXPENSES
1	75,000	25,000	80,088	156,548*
2	100,000	30,000	152,008	282,008
3	115,000	35,000	227,008	377,008
4	130,000	40,000	287,008	457,008
5	145,000	50,000	347,008	542,008

*includes 1,460 Play Store fee

PROFIT AND LOSS STATEMENT: EXPECTED PROFITABILITY.

Revenue – Expenses = Net Profit/Loss

YEAR	ANNUAL REVENUE	ANNUAL EXPENSES	NET INCOME
1	287,040	180,088	106,952
2	1,148,160	282,008	866,152
3	2,870,400	377,008	2,493,392
4	5,166,720	457,008	4,709,712
5	6,888,960	542,008	6,346,952

Summary

Here are the updated projected profits for each year:

Year 2025: PHP 106,952

Year 2026: PHP 866,152

Year 2027: PHP 2,569,392

Year 2028: PHP 4,709,712

Year 2029: PHP 6,346,952

BREAK-EVEN ANALYSIS: WHEN DO YOU EXPECT TO BECOME PROFITABLE?

The break-even analysis identifies the point at which total revenue equals total expenses, resulting in neither profit nor loss. This analysis provides insight into when ALALAI is expected to achieve profitability based on the projected revenue and expense figures over a five-year period.

Cumulative Profit

Cumulative profit is calculated by adding each year's net income to the cumulative total of previous years. The projections for ALALAI are as follows:

Year 2025:

Annual Profit: PHP 106,952

Cumulative Profit: PHP 106,952

Year 2026:

Annual Profit: PHP 866,152

Cumulative Profit: PHP 106,952 (previous cumulative) + PHP 866,152 = PHP 973,104

Year 2027:

Annual Profit: PHP 2,493,392

Cumulative Profit: PHP 973,104 (previous cumulative) + PHP 2,493,392 = PHP 3,466,496

Year 2028:

Annual Profit: PHP 4,709,712

Cumulative Profit: PHP 3,466,496 (previous cumulative) + PHP 4,709,712 = PHP 8,176,208

Year 2029:

Annual Profit: PHP 6,346,952

Cumulative Profit: PHP 8,176,208 (previous cumulative) + PHP 6,346,952 = PHP 14,523,160

So, the cumulative profit for each year is as follows:

- Year 2025 Cumulative Profit: PHP 106,952
- Year 2026 Cumulative Profit: PHP 973,104
- Year 2027 Cumulative Profit: PHP 3,466,496
- Year 2028 Cumulative Profit: PHP 8,176,208
- Year 2029 Cumulative Profit: PHP 14,523,160

BREAK-EVEN POINT

The break-even point occurs in Year 1, as the business generates a positive cumulative profit of ₱106,952. This demonstrates that total revenue exceeds total expenses from the outset of operations.

CONCLUSION

Based on the financial projections, ALALAI is expected to achieve profitability in its first year of operation. The cumulative profit is projected to grow consistently, reaching ₱14,523,160 by Year 5, reflecting the platform's scalability and strong revenue potential. These results suggest a sustainable business model capable of generating continuous financial growth while serving the targeted market effectively.

Funding Requirements: How much funding you need and how it will be used?

Funding Amount Needed

To ensure the successful launch and operation of ALALAI in its first year, the required funding amounts to PHP 1,000,000. This covers all projected expenses necessary to develop, launch, and maintain the application.

Breakdown of Funding Requirements

- **Team Compensation:** PHP 75,000 – Covers salaries and wages for the development team, including software engineers, designers, and project managers.
- **Miscellaneous Costs:** PHP 25,000 – Includes unforeseen expenses, operational costs, and other administrative needs.
- **Backend:** PHP 79,088 – Covers all server and infrastructure expenses necessary to support ALALAI's core functionalities, including hosting the large language model (LLM), integrating Whisper for voice processing, and managing data storage and authentication through Firebase. This ensures smooth, reliable, and scalable performance for all users throughout the first year.
- **Play Store Listing Fee:** PHP 1,460 – One-time fee for listing the application on the Google Play Store. (Note: This fee is applicable only for the first year and is a one-time payment.)
- **Remaining:** Variable costs like salaries, expansion, and fluctuating API costs in the first 2 - 3 years. The remaining will be handed to research and development, like model, infrastructure, and operations optimization.

Total Funding Required: PHP 1,000,000

RISK ANALYSIS

Key Risks: Identify potential risks.

1. Technical Challenges

Risk: The app may encounter voice recognition errors, false emergency alerts, and app or server downtime.

2. Data Privacy Concerns

Risk: Unauthorized access or data breaches could expose sensitive personal and health information.

3. Funding and Financial

Risk: Unexpected costs may impact the app's development, promotion, and long-term sustainability.

Mitigation Strategies: How do you plan to address these risks?

1. Technical Challenges

Strategy: Conduct beta testing and clear error-logging.

2. Data Privacy Concerns

Strategy: Encrypt all data, use secure multi-factor authentication, and comply with Philippine privacy laws.

3. Funding and Financial

Strategy: Obtain funding from multiple sources, such as investors and partnerships, while keeping operational costs low. Allocate contingency funds and dynamic pricing based on variable costs.

TEAM

Key Team Members: Brief Bios of Founders and Key Team Members.

GACIS, RONALD MISCHA D.

Chief Marketing Officer

BIO: Mr. Ronald Gacis is the dynamic Chief Marketing Officer of Alal-AI, known for his charismatic personality and exceptional communication skills. With a natural gift for sales and a wide network of connections, he excels in building relationships that support the company's mission. As a passionate technopreneur, Ronald blends creativity and market strategy to expand Alal-AI's reach, ensuring the platform connects with families and seniors who benefit most from smart care technology. His confidence and collaborative approach make him a driving force in Alal-AI's brand growth and community engagement.

JAVIER, GUILLIAN ANN T.

Chief Operating Officer

BIO: Ms. Guillian Javier brings structure, quality, and heart to Alal-AI as its Chief Operating Officer. Known for her graceful charisma and compassionate personality, she ensures that every part of the organization runs smoothly and efficiently. A creative thinker and hardworking leader, she excels in optimizing workflows and managing operational resources. Her financial awareness, approachability, and disciplined mindset support Alal-AI's continuous improvement and deliver the best experience for users and partner caregivers.

LIMUTOS, GERALD P.

Chief Financial Officer

BIO: Mr. Gerald Limutos oversees the financial foundation and long-term growth of Alal-AI with brilliance and strategic insight. A confident and charismatic technopreneur, he is widely respected for his expertise in numbers, resource management, and creative problem-solving. His strong leadership presence, combined with exceptional intelligence, enables him to secure financial stability while supporting innovation across the organization. Easy to collaborate with and admired for his sharp thinking, Gerald ensures Alal-AI remains both sustainable and scalable.

PERCAL, GABRIEL C.

Chief Technology Officer

BIO: Mr. Gabriel Percal is the technological mastermind behind Alal-AI's smart care ecosystem. A skilled developer with a talent for coding and algorithms, he is passionate about building technology that improves lives. Despite his quiet and cool demeanor, Gabriel's deep knowledge in Information Technology drives powerful innovation within the platform. With strong memorization skills, rapid learning ability, and a technopreneurial mindset, he leads the development of secure, reliable, and user-friendly features that keep Alal-AI at the cutting edge of digital healthcare.

SILVANO, MARIAH CARMELA M.

Chief Executive Officer

BIO: Ms. Mariah Silvano leads Alal-AI with a vision rooted in compassion and innovation. As CEO, she brings a strong sense of empathy and care for the well-being of users, especially seniors who rely on continuous support. Highly confident and considerate, she guides the team with thoughtful leadership, creative direction, and a people-first philosophy. With experience in technopreneurship, Mariah ensures Alal-AI remains a purpose-driven application designed to empower families and provide reliable assistance in everyday medication and care.

Organizational Structure: Company Structure and Role

Figure 3. Organizational Chart of Alal-AI.

RECAP OF THE OPPORTUNITY: Business Potential

ALAL-AI presents a scalable and socially impactful solution that addresses a rapidly growing need in the Philippine market. With the increasing population of elderly citizens, particularly in CALABARZON and NCR, there is an urgent demand for accessible tools that ensure medication adherence, health monitoring, and emotional support. ALAL-AI

directly responds to this gap by offering a culturally attuned, voice-activated mobile assistant that empowers seniors to remain safe, healthy, and independent while keeping families informed in real time. With a promising freemium model, strong market demand, and clear opportunities for partnerships within the healthcare ecosystem, ALAL-AI is positioned to become a leading digital caregiving companion for Filipino families and an essential enabler of improved elderly care nationwide.

CALL TO ACTION: Ask for Investment and Partnership

To accelerate development, implementation, and nationwide adoption, we are seeking strategic partnerships and funding support. We aim to collaborate with organizations and supporters who share the mission of promoting better elderly care through innovative and inclusive technologies. Investment and partnership opportunities will directly support further AI development, feature integration, large-scale pilot testing, and outreach initiatives with local communities and health institutions. By supporting ALAL-AI, stakeholders contribute to a sustainable solution that enhances Filipino lives while tapping into a strong and expanding market in digital health.

CONTACT INFORMATION: Follow-Up and Coordination

For inquiries, partnership proposals, or further discussions, you may reach the ALAL-AI development team (DEVUNIX PH) through the following:

Email: devunixph@gmail.com

Polytechnic University of the Philippines, Sto. Tomas Campus

Project Lead Contact: Mariah Carmela M. Silvano

Mobile: 09518965091

We welcome the opportunity to collaborate and move forward together in shaping a safer, healthier, and more connected future for elderly Filipinos.
